Radioactive waste leaking from tanks at Washington state nuclear site

Governor says news is 'disturbing for Washingtonians' but officials deny any immediate danger of contaminating the Columbia River

Reuters guardian.co.uk, Saturday 23 February 2013 10.23 GMT

1. Six underground storage tanks at a nuclear facility in Washington state are leaking radioactive waste, but there is no immediate risk to human health, officials say. The newly discovered leaks, at the Hanford Nuclear Reservation, come one week after the US energy department revealed that radioactive waste was found to be escaping from one tank at Hanford. The seeping waste adds to decades of soil contamination caused by past storage tank leaks at Hanford and threatens to further taint groundwater below the site. However, officials said there was no immediate danger of any pollution of the Columbia River.
2. Washington's state governor, Jay Inslee, said he was told on Friday by outgoing energy secretary Steven Chu that six of the aging, single-walled tanks were leaking radioactive waste. "There is no immediate or near-term health risk associated with these newly discovered leaks, which are more than 5 miles (8km) from the Columbia River," Inslee said. "But nonetheless this is disturbing news for all Washingtonians."
3. The governor said Chu told him that his department initially missed the other five leaking tanks because staff there did not adequately analyse data. "This certainly raises serious questions about the integrity of all 149 single-shell tanks with radioactive liquid and sludge at Hanford," he said. The energy department issued a brief statement acknowledging that six waste tanks were found to be leaking and adding that there was "no immediate public health risk".
4. Four of the tanks in question, including the two biggest of the group, are known to have leaked waste in the past as well, Suzanne Dahl, the tank waste treatment manager for the state Department of Ecology, told Reuters. "It points to the age of the tanks and how there's going to be an increased probability of this happening in the future," she said. "When waste is in the tanks, it's manageable. Once it's out of the tanks and in the soil, it's much harder to manage it, remove it, and down the road you're adding to contamination in the groundwater that already exists."
5. The energy department said last week that declining liquid levels in one tank at Hanford showed it was leaking at a rate of 150 to 300 gallons (568 to 1,136 litres) per year. It subsequently informed state officials that a second, larger tank was leaking at about the same rate, while the four smaller tanks were leaking at a rate of about 15 gallons per year, Dahl said. The department said that monitoring wells have identified no significant changes in concentrations of chemicals or radionuclides in the soil.
6. The two biggest tanks at issue have capacities of about 750,000 gallons and 500,000 gallons, while the four others are designed to hold up to 55,000 gallons, Dahl said. All were constructed many decades ago. The 586 sq m (1,518 sq km) Hanford reservation was established near the town of Hanford in 1943 as part of the Manhattan Project, the US government program that developed the first atomic bombs.
7. Production of plutonium materials at the site continued through the Cold War and ended there in 1989 as work shifted to cleanup of nuclear and chemical waste at Hanford, considered one of the largest and most complex such projects in the country. Weapons production at the site resulted in more than 43m cubic yards of radioactive waste and 130m cubic yards of contaminated soil and debris, according to the US Environmental Protection Agency, which says that approximately 475bn gallons of contaminated water have been discharged into the soil.

QUESTIONS:

Select the correct answer (a – d) to each question and mark it on your answer sheet. There is only ONE correct answer to each question.

Polish becomes England's second language

Data from 2011 census reveals 546,000 people in England and Wales speak Polish

Robert BoothThe Guardian, 30 January 2013

1. Polish is now the main language spoken in England after English, according to 2011 census data released by the Office for National Statistics on Wednesday. The first ONS language figures, recorded from a survey of 56.1 million residents of England and Wales, show 546,000 speak Polish. There are still slightly more Welsh speakers in Wales at 562,000.
2. The statisticians recorded more than 600 different responses to the question "what is your main language", including different languages and dialects. They grouped these into more than 104 different languages or language groups and identified 49 main languages that have at least 15,000 speakers.
3. Of residents of England and Wales aged over three, 4.2 million, or 8% of the total, had a main language other than English. After English, Welsh and Polish, the next biggest languages in England and Wales were the Indian and Pakistani languages of Punjabi, Urdu, Bengali (including Sylheti and Chatgaya) and Gujarati which taken together account for close to a million people.
4. They are followed by Arabic, French, Chinese and Portuguese. The majority of the 141,000 Chinese speakers in England and Wales do not count Mandarin or Cantonese as their main language but one of dozens of regional dialects such as Hakka and Hunanese.
5. The fine grain of the data makes it possible to find out who speaks what in your postcode and where language groups are gathered. The highest concentration of Gujarati can be heard in Leicester, Cantonese and Mandarin in Manchester, Lithuanian in Boston in Lincolnshire, Punjabi in Slough in Berkshire, and Somali in Brent, north-west London.
6. You are most likely to hear English spoken in Redcar in the north-east where it is the main language for 99.3% of people. Swedish was the smallest of the main languages, but speakers of the smaller languages can find themselves in a tiny minority.
7. There was only one person in Barnet and one in Bexley who said they spoke Caribbean creole. In England and Wales 629 people speak Romany, 58 speak Scottish Gaelic, while 33 said they speak Manx Gaelic – making it the smallest language grouping.
